

4.44 Wb

$$l = 0.1 \quad r = 17.5 \text{ mm}$$

$$10^{-6} \frac{\text{m}^2}{\text{m}^2}$$

$$B(\theta) = 0.6 \sin(\theta) \Rightarrow$$

$$\Phi_L = 0.6 \cdot \cos \theta \cdot 2r \cdot l = 1.2 \cdot r \cdot l \cdot \cos \theta$$

$$= 2.1 \text{ mWb} \cdot \cos \theta$$

$$U_{\text{rms}} = \frac{N}{\sqrt{2}} \frac{d\Phi_L}{dt} = \frac{N}{\sqrt{2}} \cdot 2.1 \cdot 10^{-3} \cdot \omega \sin(\omega t)$$

$$= \frac{2\pi}{\sqrt{2}} \cdot N \cdot 2.1 \cdot 10^{-3} \cdot f = 24$$

$$\Rightarrow 4.44 N \cdot 2.1 \cdot 10^{-3} \cdot 25 = 24$$

$$N = 103 \text{ turns} \quad \Phi$$

$$\text{Air gap area} = \pi \cdot (20^2 - 19^2) \cdot 10^{-6} \text{ m}^2 = 175\pi \cdot 10^{-6} \text{ m}^2$$

$$= 175\pi \cdot \text{mm}^2$$

$$\text{With } 0.7 \text{ FF} \Rightarrow \text{Coil area} = 122.5\pi \cdot \text{mm}^2 \approx 385 \text{ mm}^2$$

$$\text{Coil area per phase} = \frac{385}{3} = 128 \text{ mm}^2$$

$$\Rightarrow \text{Coil area per phase per coil} = \frac{128 \text{ mm}^2}{206} = 0.62 \text{ mm}^2$$

Area per coil = $0.62 \text{ mm}^2 \rightarrow$ Choose AWG 20 whose $r = 0.106$
 $r = 0.812$ Area per coil = 0.52

For the chosen coil

$$J = 4 \text{ A/mm}^2 \text{ given}$$

$$\Rightarrow I = J \cdot \text{Area per coil} = 4 \frac{\text{A}}{\text{mm}^2} \cdot 0.52 \text{ mm}^2 = 2.08 \text{ A}$$

$$\text{length per turn} = 2(r_{\text{mean}} + l) = 2(17.5 \cdot 10^{-3} + 0.1) = 0.235 \text{ m}$$

$$\text{Total length} = 0.235 \cdot 103 = 24.2 \text{ meters per phase}$$

$$\text{Coil Resistance} = 33.31 \frac{\text{m}\Omega}{\text{m}} \cdot 24.2 \approx 806 \text{ m}\Omega \text{ per phase}$$

$$P_{\text{copper}} = 2 \cdot 0.8 \cdot 0.806 = 3.48 \text{ W per phase}$$

coil alligee $\rightarrow 4 \text{ mm}$
 coil $\rightarrow 0.812$
 diameter $\rightarrow 4.92 \Rightarrow$ 5 coils can come on top of each other at most. assuming such arrangement

\Rightarrow There will be around 20 coils groups on each side

$$20 \cdot 0.812 \text{ mm} = 16.24 \text{ mm} = \text{Arc length per phase} = 32.48 \text{ mm per phase}$$

$$\Theta \cdot r = 32.48 \text{ mm} \text{ where } r = 10 - \frac{r}{2} \cdot 0.812 = 18$$

$$\Rightarrow \Theta = 1.8 \text{ rad} = 103^\circ \text{ degree per phase}$$

ϕ_{peak}	N	AWG 20	I_{rms}	P_{copper}	Coil Spread Angle per phase	$S_{\text{in max}}$
2.1 mm	103 per phase	$r = 0.106$	2.08 A	1.96 W per phase	103°	$3 \cdot 24 \cdot 2.08 = 150 \text{ VA}$
